

For calendar year 2017 water reporting, the CDWA & SDWA are providing three (3) Excel Spreadsheets based on the weather stations depicted on this map. The Staten Island and Holt weather stations are new stations that came online in 2016. Diverters may use whichever spreadsheet they believe is most appropriate for their particular diversions. The following page shows a comparison of the measured evapotranspiration in inches during each month between these three stations as well as the formerly used Manteca station. As indicated, the differences between the stations are not dramatic.
